PROFESSIONAL SUMMARY

Solutions-oriented AI Automation Engineer and Full-Stack Developer specializing in building production-grade MERN applications, FastAPI backend architectures, and n8n visual automation pipelines. Experienced in designing code-based autonomous AI agents, offline-first mobile assistant prompts, secure financial dashboards, construction timeline planners, and dental clinic scheduling systems. Proven expertise in using Prompt Engineering to structure complex model outputs and automate mission-critical logistics and business workflows.

TECHNICAL SKILLS

AI & Automation: Code-Based Agentic AI, n8n Automation, System Prompts, LLM Integration
Full-Stack & APIs: React.js, Node.js, Express.js, MongoDB, FastAPI, Python, Swagger
Infrastructure & Tools: Vercel, Render, Streamlit, Git, MongoDB Atlas, SQL, Postman

PROFESSIONAL PROJECTS

Vanguard Global Freight

AI DOCUMENT EXTRACTION PORTAL

IMPACT: AI DOCUMENT EXTRACTION PORTAL REDUCING CUSTOMS INVOICE PROCESSING TIMES BY 75%.

Engineered multi-layered prompt schemas to automatically parse and validate international trade manifests. Deployed a Streamlit application integrated with advanced AI model APIs to map unstructured invoice text directly into structured database tables.

Python Logistics API

FASTAPI BACKEND ARCHITECTURE

IMPACT: ROBUST BACKEND SYSTEM HANDLING REAL-TIME FREIGHT VALIDATION AND ROUTING COMPUTATIONS IN UNDER 120MS.

Architected a high-throughput FastAPI engine with secure endpoints and Pydantic validation schemas. Integrated Swagger documentation to permit seamless, automated API routing queries for third-party shipping coordinates.

AI Workflow Automation

N8N & AI ORCHESTRATION

IMPACT: AUTOMATED STANDARD SHIPPING MANIFESTS, REDUCING MANUAL OPERATIONS ENTRY TASKS BY 80%.

Developed n8n visual workflows routing unstructured email manifest payloads to parser webhooks. Configured structural prompt logic within an AI sandbox to automatically categorize and log manifest items directly to operational databases.

Mobile App AI Assistant

OFFLINE-FIRST PROMPT ENGINEERING

IMPACT: OFFLINE ASSISTANT GUIDING LOGISTICS DRIVERS THROUGH TROUBLESHOOTING CHECKLISTS WITH SUB-SECOND LATENCIES.

Designed highly compact, token-optimized system prompts simulating field driver workflows. Structured system instructions and dialog trees to guide drivers through vehicle diagnostic checks without requiring active network connectivity.

Atlas Logistics & Shipment Tracker

MERN SHIPPING PORTALS

IMPACT: REAL-TIME TRACKING AND DISPATCH SYSTEMS REDUCING DISPATCHER PLANNING CYCLES AND CUSTOMER INQUIRY VOLUMES BY 35%.

Engineered load scheduling dashboard and real-time shipment trackers using MongoDB, React, and Node.js. Integrated status-transition webhooks and automated driver manifest coordinates calculations to streamline tracking.

Commercial Client Portals

NORTHOAKS WEALTH, HIRANI CONSTRUCTIONS, HASNAIN DENTALS

IMPACT: POLISH ADMINISTRATIVE PORTALS REDUCING APPOINTMENT BOOKING ANOMALIES BY 40% AND ELIMINATING INVOICE PLAN TRACKING ERRORS.

Developed data-visualization wealth panels (React/SVG), dental schedulers matching patient dates with doctor shifts, and construction pipelines mapping blueprint versions and budget constraints against spent project capital.

EDUCATION

Master of Business Administration (MBA)

Karachi, Pakistan
